

ORCHID CARE 101

Water weekly with distilled water.

Wrinkly leaves indicate it's time to water.

Place in bright, indirect, or diffused light.

Feed with an orchid-specific fertilizer weekly when watering. (pause when in bloom.)

55°-65° F promotes flower spike production.

Cut back flower stems after flowers fade.

Plant in a chunky orchid bark with added perlite to promote drainage and aeration.

Repot after flowering and when pushing out of pot. Use terra cotta or a decorative container with holes to encourage air flow.
